

### **What Would Dr. King Say Today?**

As January comes to a close, Dr. Martin Luther King Jr. reminds us that America is still facing unfinished work. The struggles for racial justice, economic fairness, and moral leadership remain, often sustained not only by hatred, but by silence and indifference. He would challenge us to see injustice clearly and refuse to grow comfortable with it. He would also reaffirm the power of peaceful protest, not as weakness, but as disciplined moral resistance. Dr. King believed that nonviolence forces a nation to confront its conscience. And he would call us, even now, to choose courage over comfort, justice over division, and love as a force strong enough to bend the arc toward a more just future.

**Happy Birthday, Dr. Martin Luther King**

## CES Spotlights 2026

### "Physical AI"

### Steals the Show

This month's Consumer Electronics Show (CES) was dominated by Physical AI intelligence embedded in robotics. Humanoid robots capable of multi-day unsupervised tasks are now entering mass production, targeting warehouse and industrial labor.

### Tra'Bian Enterprises Takeaway

As AI moves from screens to the physical world, we are expanding our IT Staffing focus to include IoT and Robotics-ready engineers.

### Cloud 3.0

### Sovereignty and Hybridity

The "Cloud 3.0" era has arrived. Organizations are moving away from centralized public clouds toward Sovereign Clouds and Hybrid AI Infrastructure to keep data local, secure, and cost-effective.

## **Tra'Bian Enterprises Takeaway**

We specialize in matching your projects with cloud architects who understand the nuances of AWS, IBM, and Google AI platforms within these new sovereign frameworks.

## **The "Preemptive" Cybersecurity Shift**

Reactive security is no longer enough. In 2026, the trend is Preemptive Cybersecurity, using AI to neutralize threats before they materialize.

## **Tra'Bian Enterprises Takeaway**

Security is a core pillar of our IT Staffing Solutions. We provide experts in Confidential Computing and Zero-Trust architectures to protect your most sensitive workloads.

## **Help Shape the Future: OSU Seeks Fractional CEOs for High-Potential Startups**

Do you have a track record of leadership and a passion for bringing cutting-edge ideas to life? The Ohio State University's Innovation & Commercialization Team is looking for experienced entrepreneurs and business leaders to bridge the gap between breakthrough research and the open market.

Jay Dahlman, OSU's Associate Director of Licensing, recently shared an exciting call for fractional CEOs and business leads. This is a unique invitation to lead pre-launch startups built on technologies developed right here at Ohio State.

The Opportunity: Lead Without the Heavy Lifting  
The biggest hurdle for many entrepreneurs is the "R" in R&D. In this role, the technology is already developed and vetted. Your mission is to provide the strategic leadership necessary to move these innovations toward commercialization.

### Why consider this?

- Focus on Leadership: You lead the venture without having to develop the underlying tech.
- High Impact: These startups span diverse sectors and represent some of the most promising research in the community.
- Equity & Impact: This is a "sweat equity" opportunity with the potential for significant fiscal and social returns.

### Whats the Commitment Looks Like?

This role is designed for busy professionals who want to stay engaged with the startup ecosystem without a full-time pivot:

- Time: 2–4 hours per week.
- Duration: Initial commitment of 18–24 months.
- Key Task: Applying for state and federal funding. (Don't worry—the OSU team provides full support during this process to ensure you're set up for success).

To learn more or to schedule a time to discuss these specific ventures. Contact:
